I am writing to ask you to reject NAB petition 04-160. Satellite Radio is a true example of how business competition should better the entire industry. As a traveler, I look forward to being able to get these weather and traffic reports when I need them without having to listen to blabber and commercials that I have no interest in and only slow down my ability to be productive in my job. Any attempts to stop the ability for satellite radio to provide additional services will be a detriment to technological progress. What if someone would have said years ago that the light bulb had to be stopped because the candle makers didn't like it and considered it a threat?

Food for thought.
